Abstraction, Integration, and Organization of Information for Display: 
Approach and Emerging Methodologies

A. Degani, B. Shafto, & C. Jorgensen

Logistics Inventory Management Group

Abstraction.
The diagram of the London Underground shows the main stations and lines, with the geometric structure defining the layout.

Integration.
The "Heliograph" diagram uses a helicoidal structure to represent the relationships between different elements, allowing for a clear and organized view of the data.

Organization.
A conceptual framework is presented, illustrating the process of abstraction, integration, and organization in a hierarchical manner.

Inspiration.
This organization of the elements is inspired by traditional and modern art, including the use of patterns and structures similar to those found in nature and society.

Early.
The initial stages of the project focus on understanding the data and developing a preliminary design framework.

Final.
The final design is a comprehensive integration of all the elements, with a focus on visual clarity and effectiveness.
